Hi Kagglers,

**Today's Assignment**

1. [Read this tutorial](#) (from Lesson 3 of the Python course)
2. [Complete this exercise](#) (from Lesson 3 of the Python course)

**What You'll Learn**

In **Lesson 3 (Booleans and Conditionals)**, you'll learn all about the Boolean data type, which allows you to represent "True" and "False" in Python code. This will provide a strong foundation for understanding how to write conditional statements, which are used to modify how code runs based on whether certain conditions hold.

Happy learning,  
Alexis
